Beyond Chemo – Recent Developments in Personalized Oncology

日時 令和6年3月28日(木) Date and Time: March 28, 2024 (Thu) 6:00 pm~7:30 pm

言語 英語 Language: English

場所 基礎研究棟会議室2(印刷部横)

Venue: Meeting Room No2 Basic Medical Research Building

Cancer still is the second most common cause of death in industrialized countries. Advances in cancer biology resulted in major progress in diagnosis and treatment of cancer patients in recent years. Genomics and transcriptomics based molecular diagnostics now provide deep insight into expression of oncogenes and deficiencies of tumor suppressor genes in cancers of individual patients and hence allow for recommendations of personalized interventions with targeted therapeutics or immune-modulating drugs. The Comprehensive Cancer Center Freiburg, CCCF with its more than 20 tumor boards provides the best possible and most advanced interdisciplinary care for its patients. Furthermore, the CCCF coordinates basic and translational cancer research and transfers the newly gained knowledge into clinical practice via multiple clinical trials. Examples of projects aimed at re-expression of MHC1 on cancer cells, inhibition of oncogenic signaling by the mutated kinase BRAF and novel approaches for treatment of Graft versus Host Disease, GvHD will be discussed.

事前の申込みは不要です。No Registration Required.
