Publishing licences and compliance with open access mandates

Nature Research author licence policy

This policy applies to all journals published by Nature Research, including *Nature* and the journals with "Nature" in their titles. Nature Research's policies are compatible with the vast majority of funders' open access and self-archiving policies. Please see [here](#) for exceptions.

Nature Research does not require authors of original (primary) research papers to assign the copyright of their published contributions. Authors grant Nature Research an exclusive licence to publish, in return for which they can reuse their papers in their future printed work without first requiring permission from the publisher of the journal.

For commissioned articles (for example, Reviews, News and Views), copyright is retained by Nature Research.

General information about licencing policies and re-use can be found at the [reprint and permission website](#).

Creative commons licences

Nature Research open access and hybrid journals

All open access articles published in Nature Research Journals are published under Creative Commons licences. Please see the licence section on individual journal websites for more information, for example: [Nature Communications](#) and [Scientific Reports](#).

For more information about open access licensing, please see our [open research site](#).

Nature Research journals

At Nature Research, we occasionally publish specific types of papers in our subscription journals under a Creative Commons licence. These include:

- articles that are publishing the reference sequence of an organism's genomes (or in the case of microorganisms, finished or draft genomes of novel taxa for which no previous genome sequence was available). A *Nature* Editorial introducing this service can be read [here](#).
- articles describing reporting and experimental standards, consensus statements and white papers presenting the roadmap of large community initiatives (policy introduced in April 2011)
- articles describing community experiments to compare the performance of software tools (policy introduced in November 2012)
- under exceptional circumstances, articles addressing important public health needs

The application of these licences is at the editor's discretion and for journals that do not have an open access option no article processing charge is applied. If you have questions about this type of content, please contact the journal's editor who will determine if the paper qualifies as part of one of these categories.

The licence used for OA articles in Nature Research subscription journals is CC BY 4.0. Our policies are compatible with the vast majority of funders' open access and self-archiving policies. Please see [here](#) for exceptions.

Self-archiving policy

Nature Research's policies are compatible with the vast majority of funders' open access and self-archiving mandates.

More information is available on the [SHERPA/ROMEO website](#). Nature Research actively supports the self-archiving process, and continually works with authors, readers, subscribers and site-license holders to develop its policy.

Preprints

Nature Research journals support posting of primary research manuscripts on community preprint servers such as [arXiv](#) and [bioRxiv](#). Preprint posting is not considered prior publication and will not jeopardize consideration at Nature Research journals. Preprints will not be considered when determining the conceptual advance provided by a study under consideration at Nature Research. Authors posting preprints are asked to respect our policy on communications with the media (<http://www.nature.com/authors/policies/embargo.html>).

Our policy on posting and citation of preprints of primary research manuscripts is summarized below:

- The original submitted version of the manuscript (the version that has not undergone peer review) may be posted at any time. Authors should disclose details of preprint posting, including DOI, upon submission of the manuscript to a Nature Research journal.
- For subscription journals, the Author's Accepted Manuscript (authors' accepted version of the manuscript) of the manuscript may only be posted 6 months after the paper is published, consistent with our self-archiving embargo (<http://www.nature.com/authors/policies/license.html>). Please note that the Author's Accepted Manuscript may not be released under a Creative Commons license. For Nature Research's Terms of Reuse of archived manuscripts please see: <http://www.nature.com/authors/policies/license.html#terms>
- For subscription journals, the published PDF must not be posted on a preprint server or any other website. However, authors are encouraged to obtain a free SharedIt link of their paper, which can be posted online and allows read-only access. SharedIt links can be obtained by submitting the published article DOI at <http://authors.springernature.com/share>
- Preprints may be cited in the reference list as below:
babichev, S.A., Ries, J. Lvovsky, A.I. Quantum scissors: teleportation of single-mode optical states by means of a nonlocal single photon. Preprint at <http://arXiv.org/quant-ph/0208066> (2002).

Author's Accepted Manuscript

When a research paper is accepted for publication in an Nature Research journal, authors are encouraged to submit the Author's Accepted Manuscript to PubMedCentral or other appropriate funding body's archive, for public release six months after first publication. In addition, authors are encouraged to archive this version of the manuscript in their institution's repositories and, if they wish, on their personal websites, also six months after the original publication. Authors should cite the publication reference and **DOI number** on the first page of any deposited version, and provide a link from it to the URL of the published article on the journal's website.

Where journals publish content online ahead of publication in a print issue (known as advanced online publication, or AOP), authors may make the archived version openly available six months after first online publication (AOP).

Open access content

For open access content published under a Creative Commons licence, the published version can be deposited immediately on publication, alongside a link to the URL of the published article on the journal's website.

In all cases, the requirement to link to the journal's website is designed to protect the integrity and authenticity of the scientific record, with the online published version on nature.com clearly identified as the definitive version of record.

Manuscript deposition service

To facilitate self-archiving of **original research papers** and help authors fulfil funder and institutional mandates, Nature Research deposits manuscripts in PubMed Central, Europe PubMed Central and PubMed Central Canada on behalf of authors who opt-in to this free service during submission. (This service does not apply to Reviews or Protocols.)

More information on the [Nature Research's Manuscript Deposition Service](#) is available. To take advantage of this service, the corresponding author must opt-in during the manuscript submission process. Corresponding authors should be mindful of all co-authors' self-archiving requirements.

Springer Nature terms for use of archived author accepted manuscripts of subscription articles

For articles published within the Springer Nature group of companies that have been archived into academic repositories such as institutional repositories, PubMed Central and its mirror sites, where a Springer Nature company holds copyright, or an exclusive license to publish, users may view, print, copy, download and text and data-mine the content, for the purposes of academic research, subject always to the full conditions of use. Any further use is subject to permission from Springer Nature. The conditions of use are not intended to override, should any national law grant further rights to any user.

Conditions of use

Articles published within the Springer Nature group of companies which are made available through academic repositories remain subject to copyright. The following restrictions on use of such articles apply:

1. Archived content may only be used for academic research. Any content downloaded for text based experiments should be destroyed when the experiment is complete.

Use must not be for Commercial Purposes

2. Archived content may not be used for purposes that are intended for or directed towards commercial advantage or
